## Office Action Summary

Application No.

10/803,384

Applicant(s)

ZHU, REIYAO

Examiner

Andrew T. Piziali

Art Unit

1771

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 18 March 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 4/19/04 & 7/21/05.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 11-14 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,787,228 to Campbell et al. (hereinafter referred to as Campbell) in view of USPN 4,025,491 to Nelson et al. (hereinafter referred to as Nelson).

Regarding claims 1-2, 11-14 and 19-20, Campbell discloses a yarn suitable to provide arc and flame protection comprising modacrylic fibers and aramid fibers (see entire document including column 1, lines 13-17 and column 4, lines 9-56). Campbell discloses that the yarn may comprise at least about 70 weight percent modacrylic fibers (about 70% is considered to read on 60%) and at least about 3 weight percent aramid (column 4, lines 9-56).

Campbell does not specifically mention the addition of cotton fibers, but Nelson discloses that it is known in the flame resistant fabric art to blend synthetic fibers with between 15 to 65 weight percent cotton to provide the fabric with the desired aesthetic hand properties, moisture absorption properties, and to minimize static electricity (see entire document including column 1, lines 62-66 and the paragraph bridging columns 4 and 5). It would have been obvious to one having ordinary skill in the art at the time the invention was made to add between 15 to 65 weight percent cotton fibers to the yarn, because the cotton fibers provide the yarn with the

Art Unit: 1771

desired aesthetic hand properties, moisture absorption properties, and to minimize static electricity.

Regarding claims 2, 12 and 20, in the event that it is shown that about 70% does not read on 60%, Campbell also discloses that modacrylic fibers are present for flame resistance (column 3, lines 18-23) while the aramid fibers are present for tensile strength (column 3, lines 25-40). Nelson also discloses that it is known in the flame resistant fabric art to blend synthetic fibers with between 15 to 65 weight percent cotton to provide the fabric with the desired aesthetic hand properties, moisture absorption properties, and to minimize static electricity. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to vary the amount of modacrylic fibers, such as below 70 weight percent, to provide the yarn with more cotton fibers and/or aramid fibers, because it is understood by one of ordinary skill in the art that the weight percent of modacrylic, cotton, and aramid fibers determines properties such as flame resistance, tensile strength, aesthetic hand properties, moisture absorption properties, and static electricity properties, and because it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

In accordance with MPEP 2144.05 (III), a *prima facie* case of obviousness may also be rebutted by showing that the art, in any material respect, teaches away from the claimed invention. *In re Geisler*, 116 F.3d 1465, 1471, 43 USPQ2d 1362, 1366 (Fed. Cir. 1997) (Applicant argued that the prior art taught away from use of a protective layer for a reflective article having a thickness within the claimed range of "50 to 100 Angstroms." Specifically, a patent to Zehender, which was relied upon to reject applicant's claim, included a statement that

Art Unit: 1771

the thickness of the protective layer "should be not less than about [100 Angstroms]." The court held that the patent did not teach away from the claimed invention. "Zehender suggests that there are benefits to be derived from keeping the protective layer as thin as possible, consistent with achieving adequate protection. A thinner coating reduces light absorption and minimizes manufacturing time and expense. Thus, while Zehender expresses a preference for a thicker protective layer of 200-300 Angstroms, at the same time it provides the motivation for one of ordinary skill in the art to focus on thickness levels at the bottom of Zehender's 'suitable' range- about 100 Angstroms- and to explore thickness levels below that range. The statement in Zehender that '[i]n general, the thickness of the protective layer should be not less than about [100 Angstroms]' falls far short of the kind of teaching that would discourage one of skill in the art from fabricating a protective layer of 100 Angstroms or less. [W]e are therefore 'not convinced that there was a sufficient teaching away in the art to overcome [the] strong case of obviousness' made out by Zehender.").

Regarding claims 11-14 and 19-20, Campbell discloses that the yarn may be used to form fabrics, such as apparel (column 7, lines 12-17).

Regarding claims 13 and 14, considering that the fabric taught by the prior art is substantially identical to the claimed yarn in terms of constituents and constituent weight percentages, it appears that the fabric would inherently possess the claimed char length.

The Patent and Trademark Office can require applicants to prove that prior art products do not necessarily or inherently possess characteristics of claimed products where claimed and prior art products are identical or substantially identical, or are produced by identical or substantially identical processes; burden of proof is on applicants where rejection based on

Art Unit: 1771

inherency under 35 U.S.C. § 102 or on prima facie obviousness under 35 U.S.C. § 103, jointly or alternatively, and Patent and Trademark Office's inability to manufacture products or to obtain and compare prior art products evidences fairness of this rejection, *In re Best, Bolton, and Shaw*, 195 USPQ 431 (CCPA 1977).

3. Claims 3-5 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,787,228 to Campbell in view of USPN 4,025,491 to Nelson as applied to claims 1-2, 11-14 and 19-20 above, and further in view of USPN 4,865,906 to Smith, Jr. (hereinafter referred to as Smith).

Campbell discloses a yarn suitable to provide arc and flame protection comprising modacrylic fibers and aramid fibers (see entire document including column 1, lines 13-17 and column 4, lines 9-56), but Campbell does not specifically mention the use of both meta-aramid and para-aramid fibers. Smith discloses that it is known in the flame resistant fabric yarn art to include from 22 to 100 weight percent meta-aramid fibers and from 0 to 78 weight percent para-aramid fibers, on the basis of total aramid fiber, to produce a yarn with desired handle (see entire document including column 2, lines 38-42 and column 3, lines 15-30). It would have been obvious to one having ordinary skill in the art at the time the invention was made to include from 22 to 100 weight percent meta-aramid fiber and from 0 to 78 weight percent para-aramid fiber, on the basis of total aramid fiber, because the yarn would possess a desirable handle for comfort while also possessing the desired tensile strength.

4. Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,787,228 to Campbell in view of USPN 4,025,491 to Nelson in view of USPN 4,865,906 to

Art Unit: 1771

Smith as applied to claims 3-5 and 15-17 above, and further in view of USPN 5,824,614 to Gadoury.

Campbell does not specifically mention an anti-static component, but Gadoury discloses that it is known in the flame resistant yarn art to include carbon and/or metal fibers (see entire document including column 8, lines 40-59). It would have been obvious to one having ordinary skill in the art at the time the invention was made to add carbon and/or metal fibers to the yarn, because the fibers would provide anti-static properties.

5. Claims 9-10 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,787,228 to Campbell in view of USPN 4,025,491 to Nelson as applied to claims 1-2, 11-14 and 19-20 above, and further in view of USPN 5,824,614 to Gadoury.

Campbell does not specifically mention an anti-static component, but Gadoury discloses that it is known in the flame resistant yarn art to include carbon and/or metal fibers (see entire document including column 8, lines 40-59). It would have been obvious to one having ordinary skill in the art at the time the invention was made to add carbon and/or metal fibers to the yarn, because the fibers would provide anti-static properties.

6. Claims 1-5, 11-17 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,865,906 to Smith in view of USPN 4,025,491 to Nelson.

Regarding claims 1-5, 11-17 and 19-20, Smith discloses a yarn suitable to provide arc and flame protection comprising 25 to 85 weight percent polyacrylonitrile, 0 to 35 weight percent para-aramid, and 10 to 35 weight percent meta-aramid (22 to 100 weight percent meta-aramid fibers and from 0 to 78 weight percent para-aramid fibers on the basis of total aramid fiber) (column 2, lines 25-42).

Smith discloses that wool fibers may be added to provide better hand (column 2, lines 48-49), but Smith does not specifically mention the addition of cotton fibers. Nelson discloses that it is known in the flame resistant fabric art to blend synthetic fibers with between 15 to 65 weight percent cotton to provide the fabric with the desired aesthetic hand properties, moisture absorption properties, and to minimize static electricity (see entire document including column 1, lines 62-66 and the paragraph bridging columns 4 and 5). It would have been obvious to one having ordinary skill in the art at the time the invention was made to add between 15 to 65 weight percent cotton fibers to the yarn, because the cotton fibers provide the yarn with the desired aesthetic hand properties, moisture absorption properties, and to minimize static electricity.

Regarding claims 11-17 and 19-20, Smith discloses that the yarn may be used to form fabrics, such as garments (column 2, lines 54-59).

Regarding claims 13 and 14, considering that the fabric taught by the prior art is substantially identical to the claimed yarn in terms of constituents and constituent weight percentages, it appears that the fabric would inherently possess the claimed char length.

7. Claims 6-10 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 4,865,906 to Smith in view of USPN 4,025,491 to Nelson as applied to claims 1-5, 11-17 and 19-20 above, and further in view of USPN 5,824,614 to Gadoury.

Smith does not specifically mention an anti-static component, but Gadoury discloses that it is known in the flame resistant yarn art to include carbon and/or metal fibers (see entire document including column 8, lines 40-59). It would have been obvious to one having ordinary

Art Unit: 1771

skill in the art at the time the invention was made to add carbon and/or metal fibers to the yarn, because the fibers would provide anti-static properties.

*Conclusion*

8. The following patents are cited to further show the state of the art with respect to flame resistant fabrics:

USPN 4,248,934 to Wandel et al.

USPN 4,533,592 to Bingham

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew T. Piziali whose telephone number is (571) 272-1541.

The examiner can normally be reached on Monday-Friday (8:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on (571) 272-1478. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
